

Potato Pictures: (These pictures are all found on Google Images)

The previous 7 pictures depict the life cycle of the potato. They are put on this document in their intended order. The idea is that students will sequence these photos to create a life cycle. After sequencing, it would be ideal to explain to students that this cycle has no beginning or end. The potato that has been harvested will eventually look like the first seed and can be replanted for more potatoes.

Photos 4 & 5 can be used as one step or two, or photo 5 can just be used to show students what the fruit and flowers of a potato plant look like.

The following words can be printed to accompany the pictures to aid in the sequencing.

seed

planting

young plant with leaves

adult plant with leaves

plant with flowers and fruit

harvesting

potato
